## Australia's local solar panels

Is Australia a good place to buy solar panels?

Australia has seen significant growth in the solar industry over the past decade, with the rise of Australian solar manufacturing playing a crucial role in this energy transition. While some companies, like BP Solar, have closed, others like Tindo Solar and MSquare continue to thrive, producing high-quality solar panels for the Australian market.

Why are solar panels so popular in Australia?

This consistent demand underscores the opportunity for locally manufactured panels, especially those designed for tough Australian conditions. The Australian government sees this potential and is actively fostering a supportive environment for domestic solar manufacturing as a vital part of its 'Future Made in Australia' vision.

Who makes Australian solar panels?

MSquare is another Australian solar panel manufacturer, striving to make a name for themselves in the competitive solar industry. Their solar panels meet IEC quality standards and have been certified as Australian-made, ensuring reliability and durability for customers who choose their products.

What percentage of solar panels are made in Australia?

Australia currently manufactures around one per cent of the solar panels installed across the country.
