## Directly cover the roof with solar panels

Are in-roof solar panels right for Your House?

They integrate smoothly into your roof during construction or when you're replacing an old roof, avoiding the visual clutter of typical installations. Blending seamlessly with your roofline, in-roof solar panels can be a game-changer for your home. Here's why:

Can a solar panel be installed on a roof?

A solar panel array on the roof of your house can reduce the amount of heat that reaches the roof by up to 38%. This means that solar panels can indeed be installed on a roof. The sun produces energy that we can invert into usable electricity, and installing solar panels on the roof is one way to make that happen. Does heat enter your home through the roof? Yes. Solar panels can help reduce the amount of heat that enters your home through the roof.

How do in-roof solar panels work?

Just like traditional solar panels, in-roof versions use photovoltaic cells to turn sunlight into electricity. The big plus? They integrate smoothly into your roof during construction or when you're replacing an old roof, avoiding the visual clutter of typical installations.

What is solar panel roof mounting?

Solar panel roof mounting is the process of securely attaching photovoltaic panels to your home's roof structure using specialized mounting systems. This critical installation step determines both the safety and performance of your solar energy system for decades to come.
