
Helsinki environmentally friendly solar system model

Is Helsinki a sustainable city?

When you think of a city leading the charge in sustainability, it's hard to overlook Helsinki. This vibrant capital of Finland recently earned the top spot in the Global Destination Sustainability Index (GDS-Index) for 2024, a testament to its dedication to a greener, cleaner future.

Why is Helsinki a good city?

The city's ranking is a reflection of multiple factors, including its environmental strategy, community involvement, and ability to innovate. Here are a few key reasons: Renewable Energy: Over half of Helsinki's energy comes from renewable sources, and the city has been quick to adopt wind, solar, and bioenergy projects.

Why is Helsinki a green city?

The city has been systematically working towards this goal by focusing on renewable energy, waste management, green urban spaces, and smart infrastructure. From reducing carbon emissions to promoting green transportation, Helsinki has put sustainability at the forefront of its urban planning.

Is Helsinki a good city for waste management?

Smart Waste Management: Helsinki is setting an example with its advanced recycling systems. Everything from household waste to food scraps is sorted and recycled, making it one of the most efficient cities in terms of waste management.
