
Industrial frequency reverse sine wave inverter

What is a sinewave inverter?

A sinewave inverter is a device that converts DC power (such as from batteries or accumulators) into alternating current (typically 220 volts 50 Hz sine or corrected). In simpler terms, it converts direct current into alternating current. Our common emergency power supply often uses a DC battery to produce 220V AC through the use of a sinewave inverter.

What is a modified sine wave inverter?

Modified sine wave inverters are the most common and value-for-money inverters available in the market. They produce a waveform that is close to but different from that of a pure sine wave.

How to choose a high efficiency sine wave inverter?

To choose a high efficiency sine wave inverter, first consider the appropriate 12V battery capacity. The following is a high efficiency sine wave inverter electrical diagram, powered by a 12V battery. Begin with a double voltage module for the op amp power supply. The ICL7660 or MAX1044 can be selected for this purpose.

What is a high voltage dc-ac sine wave inverter?

High voltage DC-AC sine wave inverters accept wide input ranges of 450V to 800Vdc. High frequency PWM technology enables high efficiency, compact construction and low weight. ABSOPULSE has recently added the CSH 500-F6 to its line of high input voltage DC-AC sine wave inverters.
