
Integrated Electrode Flow Battery

What is a flow battery?

RFB are an energy storage system that utilizes redox reactions to store and release energy. An energy storage device that follows these types can be considered a flow battery for a general comparison.²⁷ (a) A minimum of one reversible oxidation-reduction reaction must occur.

What are redox flow batteries?

Distinguished from conventional batteries based on solid-state electrodes, redox flow batteries have electroactive materials stored in outer reservoirs while redox reactions take place on electrodes, which enables decoupled control over energy and power ^{39, 40}.
