Should I buy a portable power station or a generator?

The choice between a portable power station or a generator comes down to what you need. If you need something portable with low power output, go with a portable power station. On the other hand, a generator is the best choice if you need a higher output with continuous power.

Is a power station a generator?

A power station is not a generator. This may be confusing if you're new to the subject of portable power, but it's not your fault. The word generator is sometimes used loosely to encompass a wide range of products that share the same goal: providing electricity without a connection to the grid.

How does a portable power station work?

A portable power station works with devices like laptops, phones, and smaller appliances. Their energy output is between 250 to 3,000 watts per hour. As the batteries drain, a portable power station must be recharged. If it doesn't contain solar panels, you'll need access to another power source to recharge it.

Should you buy a generator or a portable generator?

Generators are helpful when you need a larger power output. For example, if you enjoy boondocking in your RV or if you have frequent extended power outages at your home, a portable generator is likely the best option. You'll be able to power larger appliances while keeping devices like smartphones charged.
