What is a battery management system (BMS)?

The Battery Management System (BMS) is the hardware and software control unit of the battery pack. This is a critical component that measures cell voltages, temperatures, and battery pack current. It also detects isolation faults and controls the contactors and the thermal management system.

What is a battery management system?

The battery management system includes a battery control unit and multiple cell supervision circuits. The electronic disconnect unit serves as an all-in-one solution that integrates a battery disconnect unit, a battery management system, and optionally the cell monitoring units. based on volume production possible due to global production network

What is a centralized battery management system?

Centralized battery management systems utilize a single control unit that monitors and manages all cells in the battery pack through dedicated wiring harnesses. This approach offers excellent cost efficiency for smaller battery packs and provides centralized processing power for complex algorithms.
