
Liquid flow batteries for power storage

What is a flow battery?

A flow battery is a type of rechargeable battery that stores energy in liquid electrolyte solutions contained within tanks. Unlike traditional lithium-ion or lead-acid batteries, flow batteries offer longer life spans, scalability, and the ability to discharge for extended durations.

Are flow batteries better than traditional energy storage systems?

Flow batteries offer several advantages over traditional energy storage systems. One key advantage is that the energy capacity of a flow battery can be increased by enlarging the electrolyte tanks, making it ideal for large-scale applications such as grid storage.

Are flow batteries a sustainable solution?

Flow batteries represent a versatile and sustainable solution for large-scale energy storage challenges. Their ability to store renewable energy efficiently, combined with their durability and safety, positions them as a key player in the transition to a greener energy future.
