
Micronesian Folding Container High-Pressure Type

What is a pressurised container?

A pressurised container is a versatile, sealed container or vessel that can be used in development laboratories as well as in large production facilities. The pressure inside the container is higher than the ambient pressure, thereby making pressurised processes, such as sterilisation or transfer, safe.

Which ocean shipping container type should be used?

The type and size of cargo in a shipment will determine which ocean shipping container type should be used. A container will be more or less suitable depending on a cargo's weight and density, its form - solid, liquid, gas etc. - whether it is temperature-sensitive, and so forth.

What are the six types of shipping containers?

The six types of shipping containers are dry containers, reefer containers, flat rack containers, open top containers, tank containers, and open-side containers.

What makes a Waldner pressurised container unique?

As a renowned manufacturer of pressurised containers, Waldner understands that only containers tailored perfectly to the process workflows can really work effectively. That is why every Waldner pressurised container is unique.
