
New energy storage policy support

How will China promote the new-type energy storage manufacturing sector?

BEIJING, Feb. 17 -- Chinese authorities unveiled several measures on Monday to promote the new-type energy storage manufacturing sector, as part of efforts to accelerate the development of emerging industries and the country's modern industrial system.

What is the implementation plan for the development of new energy storage?

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

What is the new-type energy storage manufacturing industry?

According to an action plan jointly issued by the Ministry of Industry and Information Technology and seven other government organs, the new-type energy storage manufacturing industry refers to the sector that produces energy storage, information processing, safety control, and other products related to new energy storage methods.

Will the energy storage industry thrive in the next stage?

The energy storage industry is going through a critical period of transition from the early commercial stage to development on a large scale. Whether it can thrive in the next stage depends on its economics.

China's nationwide installed capacity of new-type energy storage has exceeded 100 GW, more than 30 times the level at the end of the 13th Five-Year Plan period.

China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ...

New energy storage (NES) is a crucial technology for effectively integrating distributed energy sources and achieving a low-carbon transformation in the power sector. ...

Policy support can take many forms, from direct financial incentives to regulatory frameworks that level the playing field for energy storage relative to traditional energy sources. ...

Chinese authorities unveiled several measures on Monday to promote the new-type energy storage manufacturing sector, as part of efforts to accelerate the development of ...

With robust policy support, energy storage is set to enter a high-growth phase, unlocking the full potential of renewable energy while ensuring grid stability. Companies must ...

On February 27, the National Energy Administration released the "2025 Energy Work Guidance" to outline the year's energy work roadmap and boost the new energy storage ...

In this regard, several key developmental challenges remain. These challenges require collective efforts and solutions. This study first reviewed the development status of the new energy ...

As the new energy industry accelerates, countries have high hopes for new energy storage technologies as a solution to improve energy efficiency and safety. At the same time, ...

By embedding energy storage solutions within broader climate and energy policies, governments can ensure that these technologies play a significant role in meeting future ...
