What is vehicle-to-grid charging?

Vehicle-to-Grid charging allows energy to flow in both directions between an electric vehicle and the power grid. This means that an EV can not only be charged using the grid, but it can also send energy back to the grid during high-demand periods, providing a valuable service to the energy system.

What is vehicle-to-load charging?

Vehicle-to-Load charging allows an EV to be used as a portable power source powering devices like laptops, speakers, or other electrical devices during camping or fieldwork. V2L charging is becoming increasingly common, as more and more EVs are equipped with bidirectional charging capabilities.

What is vehicle-to-home charging?

Vehicle-to-Home charging enables an EV to be used as a backup power source for a home during a power outage. This type of charging allows an EV to discharge energy back into the household circuit, powering lights, and appliances. V2H charging can also be used to shift energy demand away from peak rate periods, reducing energy bills for homeowners.

Is the Highbury bidirectional DC charger a good choice?

The Highbury bidirectional DC charger, available soon, claims to be 96% efficient and features a very modern, slim design. The Highbury, touted as the world's slimmest bi-directional DC charger, will be available in two sizes, the standard 7kW and a high power 11kW (46A).
