
Outdoor power cell type

What are outdoor small cells used for?

Outdoor small cells are used to provide network densification, which means adding more cell sites to increase network capacity, as well as coverage in areas not reached effectively by macro cells.

EnerSys® is powering 5G networks.

Why should you choose a small cell power system?

When small cells are used to expand coverage, our battery backup solutions keep your network online. And our outdoor power cabinets are designed to be low profile, with the ability to add batteries when needed. These total solutions can convert a utility grid connection into an affordable, aesthetically pleasing small cell power system.

What is the battery capacity of outdoor power supply?

At present, the battery capacity of outdoor power supply in the domestic market varies from 100Wh to 2400Wh. 1000 Wh = 1 Kwh. The maximum capacity we've seen is 2400Wh, which means it has 2.4 -kilowatt storage. For high-power equipment, the battery capacity determines the battery life and how long it can be charged.

Are outdoor small cells necessary for 4G/LTE?

While valuable for 4G/LTE, they are absolutely essential for the ultra-low latency requirements of 5G. Powering outdoor small cells can be a daunting task. Regulatory and aesthetics considerations can change by locale and the sheer number of sites presents a logistical challenge in coordinating with the electrical utility.
