What is a battery management system (BMS)?

Battery Management Systems (BMS) are at the heart of electric vehicle (EV) safety, ensuring the efficient and reliable operation of lithium-ion batteries. As batteries become more powerful and complex, maintaining their safety, performance, and longevity is critical.

What are functional safety standards in battery management systems (BMS)?

01. Functional Safety Standards (ISO 26262) Functional safety standards ensure that safety-related functionality in Battery Management Systems (BMS) is maintained throughout its lifecycle, mitigating risks that could compromise the system's reliability and safety.

What are thermal safety standards for lithium ion batteries?

Thermal safety standards are crucial for maintaining optimal battery temperatures, preventing thermal runaway, and ensuring the longevity and safety of batteries. IEC 62660-2 defines performance and testing standards for lithium-ion cells, emphasizing the need for effective thermal management.

What are battery-specific standards?

Battery-specific standards address the design, testing, and safety requirements of battery systems, which directly influence the functionality and safety of the BMS. UN 38.3 governs the transport of lithium batteries and mandates specific safety tests to ensure safe handling during shipping.
