# Should the 12V solar container lithium battery pack be connected in series first and then in parallel

Should you connect lithium solar batteries in series or parallel?

In a parallel connection, the capacity increases while maintaining the same voltage, ideal for longer run times. When setting up lithium solar batteries, understanding how to connect them in series or parallel is crucial for maximizing efficiency and performance. Below, we delve into the specifics of each configuration.

How to connect lithium solar batteries in series?

Connecting Lithium Solar Batteries in Series: To connect lithium solar batteries in series, you simply link the negative pole of one battery to the positive pole of the next battery. This ensures that the same current flows through all the batteries. The total voltage of the series connection is the sum of the individual voltages.

What is the purpose of connecting lithium solar batteries in series?

The main purpose of connecting lithium solar batteries in series is to increase the output voltage. By adding up the voltages of the individual batteries, you can power devices that require higher voltage amounts. For example, connecting two 24V 100Ah batteries in series will result in a combined voltage of 48V while maintaining the same capacity.

What happens if two 12V 100Ah batteries are connected in parallel?

For example, if you have two 12V 100Ah batteries connected in parallel, the total capacity becomes 200Ah. The voltage remains the same, but the working duration of the batteries is doubled. If one battery in parallel fails, the others can continue operating, reducing the risk of system failures.
