
Solar Street Light Customization

What is solar street lighting?

Solar street lighting refers to street lights that use solar energy for illumination. These systems are particularly suitable for small areas (less than 200 sq ft). Solar street lighting was a promising street lighting option during the first decade of this century and some of these lights are still in operation.

How to install a solar street light?

To install a solar street light, first secure the Basis Cage to the ground on a level and flat surface, with one side parallel to the edge of the road. Use the four screws provided and secure it with concrete to serve as the foundation of your street lamp.
