How do you install solar panels on a roof?

Before installing solar panels on the roof, apply some sealant to the nut/bolt that connects the solar panel and the metal spacer to secure it during installation. This nut will be facing downward after installation and will be difficult to reach. Apply the sealant before installation.

Do I need a structural assessment before installing solar panels?

Before mounting solar panels, your roof must undergo a thorough structural assessment. Solar panels and mounting equipment add approximately 3-4 pounds per square foot of additional load to your roof structure. Key evaluation factors include: If your roof needs replacement, complete this work before solar installation.

What is solar panel roof mounting?

Solar panel roof mounting is the process of securely attaching photovoltaic panels to your home's roof structure using specialized mounting systems. This critical installation step determines both the safety and performance of your solar energy system for decades to come.

How do you choose a roof mounting system?

Mounting System Selection Varies by Roof Type: Different roofing materials require specific approaches - standing seam metal roofs use non-penetrating clamps, while asphalt shingles need penetrating mounts with proper flashing. Choosing the wrong system can lead to leaks and structural failure.
