
TX series communication uninterruptible power supply

What is a three-phase uninterruptible power supply (UPS)?

Our integrated circuits and reference designs for three-phase uninterruptible power supplies (UPS) help you design reliable and robust hardware with very low input and output total harmonic distortion (THD) and increased efficiency. Modern three-phase UPS designs often require: Higher performance and reliable IGBT and MOSFET gate drivers.

What types of power systems are used in communications infrastructure equipment?

Communications infrastructure equipment employs a variety of power system components. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end.

Can Texas Instruments Inc make changes to its products & services?

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice.

What is the difference between TX series and MPX series?

TX Series(1 to 10 KVA) Microprocessor Control Guarantees High Reliability, Advanced Battery Management, Cold Start Function more... MPX Series(1 to 6 KVA) Smart overload and short circuit protection for both of utility and battery mode, Green Power Function more...
