What is TIT FOR TAT?

Several variations to TIT FOR TAT have been proposed. TIT FOR TWO TATS is a forgiving strategy that defects only when the opponent has defected twice in a row. TWO TITS FOR TAT, on the other hand, is a strategy that punishes every defection with two of its own. TIT FOR TAT relies on the assumption that its opponent is trying to maximize his score.

Is TIT FOR TAT a "best" strategy?

TIT FOR TAT relies on the assumption that its opponent is trying to maximize his score. When paired with a mindless strategy like RANDOM, TIT FOR TAT sinks to its opponent's level. For that reason, TIT FOR TAT cannot be called a "best" strategy. It must be realized that there really is no "best" strategy for prisoner's dilemma.

Is TIT-FOR-TAT a good strategy for P2P computing?

Generally, fairness in p2p computing is of prime importance, as any system's performance crucially depends on collaboration. While tit-for-tat is considered to be the most successful strategy to enforce collaboration, there are several problems in practice. In a pure tit-for-tat environment,

How effective is TIT-FOR-TAT?

Tit-for-tat is widely believed to be the most effective strategy to enforce collaboration among selfish users. However, it has been shown that its usefulness for de-centralized and dynamic environments such as peer-to-peer networks is marginal, as peers can rapidly end up in a deadlock situation.

Tit-for-Tat strategy is a strategy in repeated two-player symmetric games which imitates the previous action of the opponent. We show that the Tit-for-Tat strategy is a zero ...
